

Osman Tahir Ozdemir

Software Engineer — Full-Stack (Java / Spring Boot • React / TypeScript)

Istanbul, Turkey | ozdemirosmantahir@gmail.com | github.com/osmntahir | LinkedIn

SUMMARY

Full-stack Software Engineer shipping production systems end-to-end: backend services, web apps, and hardware-level integrations. Delivered an AI-powered real estate platform (LLM-driven data extraction and matching) and a self-service gold-retail kiosk, from Linux provisioning to POS payments. Works with an AI-augmented workflow (Claude Code) to deliver demanding features quickly with clean, well-tested code.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL, Dart, Bash

Backend: Spring Boot, JPA/Hibernate, jOOQ, REST APIs, Microservices, Flask, Flyway

Frontend & Mobile: React, Vue.js, React Native (Expo), Flutter

Infrastructure: PostgreSQL, Docker, Keycloak (OAuth2/OIDC), Redis, RabbitMQ, MinIO, Linux, Git

Practices: Domain-Driven Design, Clean Code, JUnit 5, Testcontainers, AI-Augmented Development, Agile

WORK EXPERIENCE

Software Engineer — Codexist

Jul 2025 – Present

Istanbul, Turkey

- Develop an AI-powered real estate platform end-to-end: a domain-driven Spring Boot (Java 21) backend with two React + TypeScript web apps (back-office and customer-facing), on PostgreSQL, jOOQ, Keycloak, Redis, and RabbitMQ.
- Built AI pipelines that extract structured property data from appraisal reports, match raw property lists against extracted records, and auto-match neighborhoods — replacing manual data entry with automated ingestion.
- Modeled highly interdependent business rules and dynamic category-driven forms (cascading field visibility and validation), keeping the codebase clean, tested (JUnit 5, Testcontainers), and maintainable.
- Delivered a self-service gold-retail kiosk product end-to-end: Spring Boot backend, React storefront and admin panel, with integrated payment flow via POS terminals and ESC/POS thermal receipt printing.
- Wrote a Python (Flask) on-device agent that secures kiosks with token-based authentication (storefront renders only for authenticated devices) and bridges the browser to printer and POS hardware.
- Provisioned Linux devices into locked-down kiosk mode with custom Bash scripts and replicated the setup fleet-wide.

Long-Term Intern — CMV Bilişim Teknoloji

Feb 2025 – May 2025

Sakarya, Turkey

- Contributed across microservices backend, SuperAdmin panel, and mobile for the Spor Şimdi sports-booking app.
- Helped migrate the mobile app from React Native CLI to Expo, upgrading dependencies and redesigning screens.

Software Engineering Intern — Codexist

Jul 2024 – Aug 2024

Istanbul, Turkey

- Delivered features, bug fixes, and performance improvements on a real estate platform (Vue.js, Spring Boot) alongside senior engineers.

PROJECTS

Puzzle Games — Cross-Platform Mobile App

Flutter (Android & iOS)

- Independently designed and built a mobile app bundling 15 puzzle games (Sudoku, Queens, Tango, Zip, and more), implementing a distinct game-logic and solver/validation algorithm for each within one unified experience.

SmartTill — Cash Register Microservices [GitHub]

Spring Boot, Docker, Keycloak, PostgreSQL

- Designed and containerized a microservices system for payment transactions with Keycloak-secured authentication.

EDUCATION

BSc, Computer Engineering — Sakarya University

Graduated Jun 2025

GPA: 3.08 / 4.00

CERTIFICATIONS, LANGUAGES & INTERESTS

Certificate: RaConf'24 Applied Web Hacking (Sakarya University, Apr 2024) • **English:** B1 • **Turkish:** Native

Interests: Football (tactical analysis), sci-fi reading, logic puzzles, LeetCode, emerging AI developer tools
